

# Membrane Biophysics

SS 2006

Prof. Dr. Roland Winter

## Contents:

Introduction: cell membranes, membrane models.  
Intermolecular forces, hydrophobicity, physical properties of water.  
Self assembly, lipid bilayers, lipid polymorphism.  
Physical methods for studying structural and dynamic properties of membranes (DSC, PPC, SAXS, FT-IR, <sup>2</sup>H-NMR, AFM, fluorescence microscopy, FCS, ...).  
Effects of additives on membrane structure and dynamics (sterols, ions, peptides, ...).  
Non-lamellar lipid phases, kinetics of lipid phase transitions, membrane fusion.  
Lateral organization of membranes (domains, rafts).  
Dynamic and thermomechanical properties of membranes.  
Lipid-peptide interactions.  
Membrane proteins, membrane transport.  
Applications: drug delivery, etc.
